

GSEN

GLOBAL SECURITY NETWORK

360° security systems

Global Security Network designs, installs and maintenance for advanced safety systems satellite, satellite logistics, anti-intrusion systems, video control systems, access control, fuel delivery.

The Technical Department is divided into 4 sectors.

Mobile Security: specialized in the management of satellite systems, from design to Installation carried out by technicians GSN specialized in the sector Mobile (Tir, fleets, cars, boats).

Building Security: specialized in management of intrusion detection systems and video protection for civil and industrial structures, with designers and industry experts dedicated.

Research and Development: analyzes and develops all new hardware resources & Software to deal with constantly the new demands of the market and management operational.

Network Administration: Creates and monitors all services of the Central Office for customers GSN developing them for a service increasingly to measure the customer.

Live and let us **protect you**

GSN Supervisory Board is the Supervisory Authority authorized to supervise the goods all over national, in line with the provisions of the Consolidated Laws of Public Security.

Through its operations center, in which Inside there are guards particular Sworn, deals h.24, 365 days a year, services control and management of events in real time, providing immediate assistance and a service technician for the complete safety of the customer.

“Virtual guard” is our philosophy.

We do not do patrols on the road, because it would enable us to be more places throughout the day. Our central surveillance uses cutting-edge equipment that can track down stolen vehicles and detect break-ins through the systems of video surveillance or security systems specialist.

mobile security

In satellite security Gsn gives a range of operational pack suitable for any kind of need. Gps family is composed by:

- ANTI THEFT
- ANTI ROBBERY
- VEHICLE RECOVERY
- SECURITY OF TRANSPORTED GOODS
- SECURITY OF PERSON

- FLEET MANAGEMENT
- TRANSPORTATION
- CHARTER
- GROUND WORK
- WASTE MANAGEMENT
- CONSTRUCTION COMPANY, STREETS AND CIVIL
- MULTIUTILITY

operational pack

GSN MyLocSat

The locator can be installed on GSN MyLocSat any means and manages the transmissions of the positions. E 'can automatically send both the alarm accident that an alarm emergency request simply by pressing a button. E 'is used in the field of security in the field of logistics or combining together both the necessities. It can be managed by receiving and executing commands (eg engine block) and can send alarms to the Central GSN Operations Supervision.

GSN MyCarSat E MyTruckSat CONSOLE

It is satellite tracking devices for vehicles, in generally highly integrated, including a mobile industrial GSM / GPRS, a GPS receiver with 20 channels, the circuits for the radio management of access to the vehicle with transmission and reception and multi-channel rolling code, electronic sensors for the detection Automatic incident and for the control of the lifting and drag of the vehicle. Especially GSN MyTrackSat CONSOLE is recommended in logistics and security transport, while GSN MyCarSat is intended to cars and is provided with transponder recognition. within the Transport safety products Gsn can be employed specifically for the transport of maximum safety and the security system for advanced semi-GSN MyTrailerSat and containers GSN MyContainerSat.

GSN SpyBox e GSN MyContainerSat

GSN GSN MyContainerSat SpyBox and peripherals are Localization Satellite semi-trailers, trailers, carriers, pallets, containers, used as a tracer loads or parcels.

GSN Personal Guard

GSN Personal Guard is a portable device size reduced suited to ensure the safety of the person is inside and outside of your home, office or in a workplace potentially dangerous.

building security

Gsn gives a full range of services suitable for any kind of customer

- **ALARM, ANTI THEFT AND ANTI ROBBERY SYSTEMS**
- **FOG SYSTEM**
- **YARD PROTECTION**
- **ACCES CONTROL, BIOMETRY**
- **ATTENDANCE MANAGEMENT AND FUEL MANAGEMENT**

- **ANALOGIC/IP VIDEO CONTROL**
- **SOFTWARE APPLICATION**
- **VIDEO PATROL**

operational pack

Base management

Management Service of the overall data from devices. Expected the real-time contact with the customer and consequent password request for recognition in order to ensure necessary assistance and customer privacy. In case of emergency or break- established the plant operator immediately send the Police.

Advanced management

The package "Base Management" is combined with the service virtual tours that in the event of an alarm, activate the link operations center GSN Supervision of the system video protection for the time necessary to ensure the customer safety and property protection.

Superior management

The package "Advanced" is added of 2 virtual rounds during the night so as to ensure greater security of protected areas and prevent ambushes or robberies. Upon request, the customer can request "Accompaniment" virtual by operators of the plant, making sure the route and access in protected property.

*gsn mobile
satellite antitheft*

*an eye
on your vehicles*

Satellite antitheft

The satellite antitheft GSN are waterproof and anti-vibration, contain a GPS that reading the information transmitted from the satellite network available, determines a position in longitude and latitude that the system transfers on the Supervisory cartography or directly to the customer via software, giving rise to the security procedures for the recovery of the transport.

Security of transported goods

The crucial point for the effective protection of transported goods is the responsiveness of the control panel to the reception of a signal of potential alarm considering that the criminal action is conducted over few minutes. It is therefore essential a discrimination between false alarms and real alarms and this is possible only if the procedures are carried out properly and who should perform them has the readiness and experience, as well as required to staff of the Operations Centre. In case of actual alarm must be activated Police Department in the shortest possible time.

Security of person

Global Security Network takes care of the security of its customers and their families. Daily life, the daily schedule, even at night, they can expose people to risky situations. Personal GSN Guard is the answer to the need for personal safety whether at home, in the office and even abroad. GSN Personal Guard is also suitable for companies with employees who work in situations of potential danger, defenseless because they operate solo. The device communication allows you to protect the safety workplaces and consequently workers. The ease of use of the device, its versatility in different environmental situations that can predict times of danger, combined with the central video GSN surveillance, ensure complete protection of the person from one or more risks simultaneous, does not limit or

prevents daily tasks and can be customized. With GSN Personal Guard before starting an intervention potentially risky, the network will send a message notice indicating its support services entry into a dangerous situation. A short message voice will alert the support services so that they run a verification of the situation if the alarm is not canceled within a set period of time. A second type of alarm may be activated situations even more serious. In this case is sent a standard text message to the phone numbers pre-and opens a voice communication with the operations center.

Fleet management

The Localisation Satellite, in the field of Security Vehicle and control fleets (Fleet Management) are part of the historical foundations of the group GSN.

Thanks to the real time localization of goods, GSN allows professionals and fleet managers to optimize the safety aspect, paths, reducing costs and consequently increasing the added value of its services.

Always careful to search for the distribution of Satellite Security Systems of advanced technology, GSN is able to offer the certainty of a protection total on each half (cars, trucks + semi-trailer, container, earthmoving, bike and boat).

Staff is highly qualified and trained to available to the customer anywhere, 24 hours a day, 365 days to

'year, ready to provide on-site installation and real-time assistance to secure what requires protection.

The optimization of the management costs in the use of vehicles has a positive impact on revenues with a thus enhancing the competitiveness of the customer in against competitors.

The ability to control the entire fleet of vehicles, thanks also to the portal GSN TRAX, ensures accurate management that allows the reduction of operating costs and a consequent increase in operational efficiency. The control of events results in indisputably benefit and economic benefit for companies.

GSN TRAX Logistic services

GSN TRAX is an effective tool for the localization and control of the media business, based on the satellite network GPS, which allows you to view the movements of vehicles in the area through a web portal easy to use. GSN TRAX allows you to:

- locating means on the territory in real time;
- view points and routes on maps and dedicated guaranteed;
- reporting the activities carried out by means of tabulated with trips, stops, and activities;
- automatically send alerts and warnings;
- use the gps tracks to highlight interventions and work carried out on construction sites;
- monitor the deliveries performed for third parties, with the opportunity to provide its customers a temporary access the portal in order to view the status of transport;
- certify trips and stops.

GSN Work

GSN Work is the solution designed for companies carrying on business within the territory. GSN Work on your smartphone, operator communicates with the control panel and allows you to:

- send service orders directly on the display operator;
- view the maps and business data associated;
- guide the operator with the navigator on this smartphone;
- synchronize the daily management company via GPRS;
- send feedback of services performed in real time.

*gsn building
anti intrusion*

A pair of hands is shown from a top-down perspective, cupped together to hold a white silhouette of a family. The family consists of a large adult figure on the left, a smaller child figure in the middle, and another adult figure on the right. The hands are positioned as if protecting or nurturing the family. The background is a dark, gradient grey.

*an eye that watch
on your family*

Antitheft security systems

The range of anti intrusion GSN includes simple protection systems standards, systems protection entirely Wireless, up to the most advanced technology and high-performance systems rows and biometric recognition.

Through technology totally wireless and without connection to the mains 220V, GSN has developed a range of systems used to protect internal and perimeter Outdoors, guaranteeing and ensuring the reliability of transmission and continuity of system protection even in case of power outages, storms and surges voltage.

The total absence of wires, also ensures speed installation, total absence of noise and interference, the all aimed at a greater system security protection.

Yard protection

The ongoing needs of customers GSN led the company to develop a range of products for the safety of construction sites, both for the means, both for the control fleets of earth moving, both for the equipment and materials allocated regularly on construction sites, may not be protected by camera systems satellite tracking.

Access control, biometry

Keys or cards can be lost, forgotten or stolen. the innovative access control system to imprint digital part of your home or office ensure your safety at all times. the system is characterized by an easy installation and use intuitive.

With the swipe of your finger on the scanner, the lines of fingers are detected and stored as a specific code impression. Before use, the code footprint detected is compared with that deposited in memory. Through an impulse not approve your identity by gaining access or disconnection of the alarm system.

Attendance management and fuel management

ATTENDANCE MANAGEMENT. Among the most important needs of company there is a time and attendance, strategic element of business management. The software, through cards recognition, facilitate the development of attendance, lighten the work of the office staff and as a result streamline management costs. Attendance recording is divided into three modules: data collection, attendance management and payroll processing. The advantage of the service is considerable, in because information relating to attendance, absence, subdivision of hours worked in the various categories can be shipped and printed out for the office staff.

CONTROL FUEL DELIVERY. The software fuel management is ideal for all companies that have pumps internal fuel delivery and beyond. Enables verification and the control of each individual supply processing data for optimal management of business costs.

*gsn building
video protection*

*an eye on
your serenity*

Video Control

The problem of security as never before is strongly present and warned by the public . Supervise and monitor are the first necessary actions to preserve the safety of each of us. Video surveillance is the answer to this type of need, offering systems adaptable to any kind of request . the closed-circuit analog cameras provide an image PAL standard which can also be digitized . the video signal from the cameras is transmitted to a DVR or digital recorder , but there is also the possibility to manage alarms motion (motion detection) and remote access .

For the management of IP networks for video surveillance, Global Network Security software uses powerful and advanced but easy to use , high reliability and open platform , or adaptable to any type of brand camera. the cameras OVER IP being high resolution allow a use optimal in situations where it is crucial the quality and definition of details .

Software

Various solutions allow, even by the customer, a simple and accurate vision of the protection system. The devices are used by Global Security Network specially designed to allow viewing of cameras directly through the internet with applications custom installed on your PC or directly on videophones, using the GSM / UMTS network, so as to view live images and recordings in any part of the world of dedicated supports: Ipad, Iphone, Android.

Virtual guard

Global Security Network uses video surveillance systems edge that allow the control of areas protected at all times and for any case: the signaling of a fault on receipt of an alarm, technical assistance.

Fundamental use of the service of Ronda with the virtual which you can detect hazards or anomalies without putting at hazards to the customer, as are the operators of the Central surveillance that shall put in place everything necessary to defend the property of the customer. The operators of the operative Gsn Watch are also specialized in assisting virtual customer until the property, through the vision the cameras and the control of the security system installed. Gsn offers security systems at 360 ° built around the customer and their needs.

Nebbiogeno

First few seconds after the intrusion are valuable and fog safety is the perfect solution. the nebbiogeno is the most effective way to prevent theft is that acts of vandalism. In a few seconds the environment saturated with a dense fog disorienting thieves and forcing them to flee empty-handed.

The nebbiogeno is connected to the alarm system, when operated produces a fog safety absolutely harmless to people, animals, equipment electronics and furnishings.
